

Dutchman INDUSTRIES INC.

FIELD POTTERS

Dutchman's Field Potters are manufactured with the grower's specific needs in mind, which is why we carry three different types. We can also manufacture various sizes of potters as per the grower's specifications. The Interchangeable Blade feature allows one unit to fill various size pots.

Built with either a 10° or 15° angle, these machines are capable of fitting both plastic and fibre containers ranging from 5 gallons to 25 gallons.

Field Potters are custom built to meet the specifications of both client and the desired pot selected. Custom fitting is ideal as it allows for far less curing time. Whether the need is for a 2-blade or 3-blade, low-frame or high frame, Dutchman Industries can help select the proper fit to meet your needs. Potters can be set up for skid steer or excavator hook-ups.

Potting at a rate of 5 plants per minute can translate to approximately 3,000 plants a day, using just 2 labourers!

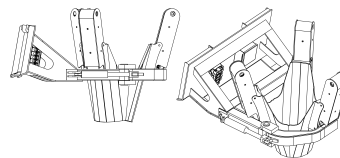

All Field Potters come with the Dutchman electronics, including a joystick controller and Dutchman's troubleshooting electronic system. Our Field Potters can be outfitted to all different types of loader units.

With its compact design and outstanding visibility, Dutchman's Potters are the perfect choice for high production nurseries.

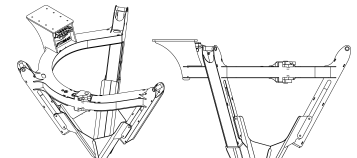

FEATURES INCLUDE:
